

SAFER FASTER SMARTER

1s measurement

AI algorithm

Contact-free

Multi-person detection

With advanced detectors and algorithms, Hikvision's Temperature Screening Thermographic Cameras are designed to detect elevated skin-surface temperatures, and can thus be used for rapid and preliminary temperature screening in office buildings, factories, stations, airports and other public places, with accuracy up to $\pm 0.3^{\circ}\text{C}$.

- **One second** to detect skin-surface temperature of a person
- **Multi-person** detection simultaneously
- **Non-contact** measurement to avoid physical contact
- **Immediately alarming** to notify operators
- **AI detection** to reduce false alarms from other heat sources

Hikvision's temperature screening thermographic cameras are designed for the detection of skin-surface temperatures so as to achieve rapid preliminary screening in public areas. Actual core body temperatures should be further confirmed using clinical measurement devices. Under any circumstances, it is highly recommended to use Hikvision's thermographic cameras in accordance with local laws and regulations.
